ADVANCE SOUND COMPANY NEWSLETTER

Welcome to the first edition of the Advance Sound Company newsletter!

For over **55 years**, Advance Sound Company has been a trusted partner in designing, installing, and supporting audiovisual systems for schools, municipalities, cultural institutions, and commercial clients. This newsletter will share updates on our latest projects, company news, and helpful information on how to connect with our team as we continue to evolve with today's technology.

Thank you,
The Advance Sound Company Team

Our Services

Advance Sound Company provides complete audiovisual solutions, including:

- Audiovisual system design and engineering
- New system installations and technology upgrades
- Wireless microphone systems and frequency coordination
- Service, troubleshooting, and equipment repair
- Preventative maintenance and service agreements
- System programming, tuning, and optimization
- User training and ongoing technical support

With over **55 years of experience**, we support schools, performing arts centers, municipalities, houses of worship, and commercial facilities.

How Can We Help?

System Upgrades & Planning

Is Your System Keeping Up?
With over **55 years of experience**, Advance Sound Company helps clients plan smart, cost-effective upgrades for aging audiovisual systems. Whether you're preparing for capital improvements, addressing equipment failures, or planning future technology needs, our sales and engineering teams provide clear guidance from design through installation.

The markets we support include K-12 schools, higher education, performing arts centers, houses of worship, and municipal facilities.

Service & Support

Our service department supports systems long after installation. From troubleshooting and repairs to preventative maintenance and programming updates, our technicians help ensure your AV systems perform as intended—when you need them most. We also offer training to help staff confidently operate their systems.

How to Submit a Service Ticket

Submit a Service Ticket

Technical Corner
Microphone Frequency Matters

Wireless microphone systems operate on specific radio frequencies, and keeping those frequencies up to date is critical for reliable performance. In recent years, changes to FCC regulations and increased wireless congestion have made older microphone systems more susceptible to interference, dropouts, and complete signal failure.

Many legacy systems still operate in frequency ranges that are no longer recommended or are now shared with other wireless services. This can result in inconsistent audio, unexpected noise, or equipment damage if improper power supplies or configurations are used.

At **Advance Sound Company**, we help clients evaluate existing wireless microphone systems to confirm they are operating in approved, interference-free frequency bands. When necessary, we recommend updates that improve reliability, extend system life, and ensure compliance with current standards—especially in schools, theaters, and municipal facilities where dependable audio is essential.

If you're experiencing microphone issues or are unsure whether your system is current, our team is available to review and provide guidance.

Clearer Sound for School Assemblies: Advance Sound Upgrades Pulaski Road Elementary Audio

Advance Sound Company recently completed an audio upgrade at Pulaski Road Elementary School, installing SoundTube line array speakers to significantly improve speech clarity and coverage for assemblies and school events. Designed for reverberant spaces, the new system delivers focused, intelligible sound while blending seamlessly into the room's architecture. The result is a reliable, easy-to-use solution that enhances communication for students, staff, and visitors.
